Steve Cinnamon
Integrated Pest Management Coordinator
USDI National Park Service
Midwest Region
1709 Jackson Street
Omaha, NB 68102-2571

Dear Mr. Cinnamon:

Enclosed for your information (Table 1) are the results of the 1990 gypsy moth trapping program at four National Park Service sites within the Midwest Region. The purpose of the trapping program is to monitor low level gypsy moth populations and to help us determine when more quantifiable survey methods such as egg mass surveys should be employed.

Gypsy moth populations remain low at all the sites. No gypsy moths were caught at either Lincoln Boyhood National Memorial or Mound City Group National Monument. At Indiana Dunes National Lakeshore, 9 moths were caught in 25 traps. A total of 834 moths were caught in 194 traps deployed at Cuyahoga Valley National Recreation Area.

Based on these results, gypsy moth populations should not have any significant impact at any of these sites for a few years. We would like to see the trapping program continued at all of these sites in 1991.

Thank you for your continued cooperation and if you have any questions regarding these results or future gypsy moth activities at these sites, please contact Brad Onken or me at 304-291-4133.

Sincerely,

Rodney L. Whiteman
